

# Improving project controls

## Seven top tips

**One** **version of the truth**  
Make sure everyone is using the same data.

**2. Connect schedules and costs**  
To eliminate mistakes and understand the real impact of any change order.

**3. Develop data standards**  
Having a consistent approach means trends can be easily understood and ensures best practice.

**4. Flexible control tools**  
By making these a priority the team are able to handle variables more effectively.

**5. Real-time reporting**  
Allows efficiencies to be delivered more effectively.

**6. Visualisation and dashboards**  
Displaying key information in easy-to-digest outputs means decision making is more effective.

**7. Shareability**  
How easy for the supply chain to access and share data across the system.
